Cautionary statement regarding forward-looking statements

The *Capital and Risk Management Pillar 3 Disclosures at 31 December 2013* ('*Pillar 3 Disclosures 2013*') contains certain forward-looking statements with respect to the Group's financial condition, results of operations and business.

Statements that are not historical facts, including statements about the Group's beliefs and expectations, are forward-looking statements. Words such as 'expects', 'anticipates', 'intends', 'plans', 'believes', 'seeks', 'estimates', 'potential' and 'reasonably possible', variations of these words and similar expressions are intended to identify forward-looking statements. These statements are based on current plans, estimates and projections, and therefore undue reliance should not be placed on them. Forward-looking statements speak only as of the date they are made. The Group makes no commitment to revise or update any forward-

looking statements to reflect events or circumstances occurring or existing after the date of any forward-looking statements.

Written and/or oral forward-looking statements may also be made in the periodic reports to the Bermuda Monetary Authority ('BMA'), financial statements of the Group, offering circulars and prospectuses, press releases and other written materials, and in oral statements made by the Bank's Directors, officers or employees to third parties, including financial analysts.

Forward-looking statements involve inherent risks and uncertainties. Readers are cautioned that a number of factors could cause actual results to differ, in some instances materially, from those anticipated or implied in any forward-looking statement. These factors include changes in general economic conditions in the markets in which we operate, changes in government policy and regulation and factors specific to the Group.

Certain defined terms

Unless the context requires otherwise, 'Bank' or 'HSBC Bermuda' means HSBC Bank Bermuda Limited, 'Group' means the Bank together with its subsidiaries, 'HSBC Holdings' means HSBC Holdings plc and 'HSBC' or 'HSBC Group' means HSBC Holdings together with its subsidiaries. The abbreviation 'US\$m' represents millions of US dollars.

Introduction

HSBC Bermuda is a leading financial services company providing retail and corporate banking, investment, trust, custody and fund administration services to international and local clients. The Bank was founded in 1889, and in 2004 became a member of the HSBC Group, one of the largest banking and financial services organisations in the world.

Regulatory framework for disclosures

The BMA supervises HSBC Bermuda both on an unconsolidated and consolidated basis, and therefore receives information on the capital adequacy of, and sets individual capital guidance for, both the solo bank and the Group as a whole. Other individual banking subsidiaries in the Group are directly regulated by their local regulators, who set and monitor their capital adequacy requirements.

At consolidated Group level, we calculated capital for prudential regulatory reporting purposes throughout 2013 using the Basel II framework of the Basel Committee on Banking Supervision ('Basel Committee'), as implemented by the BMA. Basel II is structured around three 'pillars'. The Pillar 1 minimum capital requirements and Pillar 2 supervisory review process are complemented by Pillar 3: market discipline. The BMA implemented Basel II in Bermuda from 1 January 2009 and its rules are set out in *The Revised Framework for Regulatory Capital Assessment* ('BMA Framework').

Pillar 3 disclosures 2013

The aim of Pillar 3 is to develop disclosures by banks which allow market participants to assess the scope of application of Basel II, capital, particular risk exposures and risk assessment processes, and hence the capital adequacy of the institution. Under the Pillar 3 framework all material risks must be disclosed, enabling a comprehensive view of the institution's risk profile. Disclosures consist of both quantitative and qualitative information and are provided at the consolidated level. Where disclosure has been withheld as proprietary or non-material, as the rules permit, we comment as appropriate.

The BMA permits certain Pillar 3 requirements to be satisfied by inclusion within the financial statements.

Where we adopt this approach, references are provided to the relevant pages of the audited *Consolidated Financial Statements of HSBC Bank Bermuda Limited and its subsidiaries for the financial year ended 31 December 2013* ('*Consolidated Financial Statements 2013*').

Frequency

In accordance with BMA requirements, the Group intends to publish comprehensive Pillar 3 disclosures annually. Quantitative disclosures such as capital structure, capital requirements and capital ratios are disclosed at the half year in the *Interim Pillar 3 Disclosures 2013*.

Media and location

The *Pillar 3 Disclosures 2013* and other information on the Group are available in the *About us* section on the Bank's website: www.hsbc.bm

Basis of measurement / Comparison with the Consolidated Financial Statements 2013

The *Pillar 3 Disclosures 2013* have been prepared in accordance with regulatory capital adequacy concepts and rules, rather than in accordance with International Financial Reporting Standards ('IFRS's'). Therefore, some information in the *Pillar 3 Disclosures 2013* is not directly comparable with the financial information in the *Consolidated Financial Statements 2013*. This is most pronounced for the credit risk disclosures, where credit exposure is defined as the amount at risk that is estimated by the Group under specified Basel II parameters. This differs from similar information in the *Consolidated Financial Statements 2013*, which is mainly reported as at the balance sheet date and therefore does not reflect the likelihood of future drawings of committed credit lines.

Verification

Whilst the *Pillar 3 Disclosures 2013* are not required to be externally audited, the document has been verified internally in accordance with the Group's policies on disclosure and its financial reporting and governance processes.

Consolidation basis

The basis of consolidation for financial accounting purposes and a list of entities within the Group that are fully consolidated are described on page 8 and page 40 of the *Consolidated Financial Statements 2013*.

Holdings in non-financial entities are risk-weighted, subject to certain overall limits above which a deduction from regulatory capital is required.

Scope of Basel Pillar 1 approaches

The scope of permissible Basel approaches, and those that the Group has adopted, are described below.

Risk category	Scope of permissible approaches	Approach adopted by the Group
Credit risk	<p>Basel II applies three approaches of increasing sophistication to the calculation of Pillar 1 credit risk capital requirements. The most basic level, the standardised approach, requires banks to use external credit ratings to determine the risk weightings applied to rated counterparties. Other counterparties are grouped into broad categories and standardised risk weightings are applied to these categories. The next level, the IRB foundation approach, allows banks to calculate their credit risk capital requirements on the basis of their internal assessment of a counterparty's probability of default ('PD'), but subjects their quantified estimates of EAD and LGD to standard supervisory parameters. Finally, the IRB advanced approach allows banks to use their own internal assessment in both determining PD and quantifying EAD and LGD.</p>	<p>For consolidated Group reporting, we have adopted the standardised approach.</p>
Market risk	<p>Market risk capital requirements can be determined under either the standard rules or the internal models approach. The latter involves the use of internal VAR models to measure market risks and determine the appropriate capital requirement.</p>	<p>We are not required to report under market risk methodologies as our trading book does not exceed the de minimis threshold, resulting in an exemption as defined in the BMA Framework.</p>
Operational risk	<p>Basel II includes capital requirements for operational risk, again utilising three levels of sophistication. The capital required under the basic indicator approach is a simple percentage of gross revenues, whereas under the standardised approach, it is one of three different percentages of gross revenues allocated to each of eight defined business lines. Both these approaches use an average of the last three financial years' revenues. Finally, the advanced measurement approach uses the banks' own statistical analysis and modelling of operational risk data to determine capital requirements.</p>	<p>We have adopted the standardised approach in determining its consolidated operational risk capital requirement.</p>

Future plans to implement advanced methodologies of Basel II

The Group has no immediate plans to transition from the standardised approach to the advanced approaches for operational risk or credit risk and will remain on the standardised approach under Basel II.

Future developments - Basel III

In December 2010, the Basel Committee issued two documents: 'A global regulatory framework for more resilient banks and banking systems' and 'International framework for liquidity risk measurement, standards and monitoring', which together are commonly referred to as 'Basel III'.

The Basel III rules set out the minimum common equity tier 1 ('CET1') ratio requirement of 4.5% and an additional capital conservation buffer requirement of 2.5%, which become fully effective on 1 January 2019. Any additional countercyclical capital buffer requirements will also be phased in, starting in 2016 to a proposed maximum level of 2.5% effective on 1 January 2019, although individual jurisdictions may choose to implement larger countercyclical capital buffers. The leverage ratio is subject to a supervisory monitoring period and a parallel run period which will last from 1 January 2013 until 1 January 2017. Further calibration of the leverage ratio will be carried out in the first half of 2017 with a view to migrating to a Pillar 1 requirement from 1 January 2018.

In addition to the criteria detailed in the Basel III proposals, the Basel Committee issued further minimum requirements in January 2011 to ensure that all classes of capital instruments fully absorb losses at the point of non-viability before taxpayers are exposed to loss. Instruments issued on or after 1 January 2013 may only be included in regulatory capital if the new requirements are met. Currently the Group has not issued and has no plans to issue capital instruments.

The BMA has indicated that the path to final implementation will start with final consensus on local requirements, followed by draft rules by end of 2014 and final rules in 2015. Preliminary discussions with the BMA indicate that rules will largely mirror Basel III, tailored for the Bermuda market.

At a global level, one of the most significant recent developments is the finalisation of the CRD IV rules, published by the European Commission in June 2013 and effective from 1 January 2014, to implement the Basel III framework in the EU. Significant regulatory matters within the

scope of CRD IV include quality and quantity of capital, counterparty credit risk, liquidity and funding, capital buffers and leverage.

Capital management and allocation

Our approach to managing Group capital has been to ensure that we exceed current regulatory requirements and are well placed to meet expected future requirements. The objectives of the Bank's internal capital management policies are to maintain creditor and market confidence, to sustain future development of the business, and to meet regulatory capital requirements at all times. In addition, these objectives are designed to:

- maximise the financial resources of the Bank so that it can be a source of strength to all its subsidiaries;
- ensure that the Bank generates sufficient income to pay dividends; and
- minimise any structural impediments to the free flow of capital resources, so that capital can be deployed in those businesses offering the best returns to the Bank.

In order to meet these objectives, the Bank develops capital plans which identify future capital requirements and/or surpluses. Capital plans are part of the Annual Operating Plan ('AOP') process and are used to ensure that the Group and the Bank continue to be adequately capitalised in the future. The capital plan contains actual data plus forecasts by quarter. In addition, supporting commentary is included to describe or include:

- projected timing and nature of future dividend payments;
- any known (or possible) requests for capital in addition to previously submitted capital plans;
- explanation for any material changes in current or projected risk-weighted assets;
- any plans, including amounts and timing, for local capital issuance;
- any plans with respect to repayment or refinancing of maturing capital; and
- any other information or assumptions considered relevant from an HSBC Group perspective.

Each half year the Bank submits a capital plan for the following year to the Audit and Risk Committee and the Board of Directors.

The responsibility for global capital allocation principles and decisions rests with the HSBC Group Management Board ('GMB'). Through its structured internal governance processes, HSBC maintains discipline over its investment and capital allocation decisions, seeking to ensure that returns on

investment are adequate after taking account of capital costs.

Transferability of capital within the Group

Each subsidiary manages its own capital required to support planned business growth and meet its local regulatory requirements within the context of the approved annual Group capital plan. In accordance with HSBC's Capital Management Framework, capital generated by subsidiaries in excess of planned requirements is returned to HSBC, normally by way of dividends. However, capital cannot be transferred from a subsidiary if the transfer was to cause the subsidiary to no longer have capital to cover its minimum capital requirement. Own funds in excess of the minimum capital requirement are potentially transferable as long as there is no current or foreseeable material practical or legal impediment to the prompt transfer of funds.

The Bank holds investments in subsidiaries primarily in Bermuda and Cayman. As part of a rationalisation of its operating structure the Bank's subsidiaries held in Guernsey have been liquidated in 2013 and all the capital has been repatriated to Bermuda. Currently both Bermuda and Cayman hold levels of capital well in excess of regulatory requirements. Bermuda and Cayman have free market economies and open financial markets. There are no legal constraints on the transfer of profits, royalties or fees from these regions, or on the repatriation of invested capital.

In addition, the Bank does not hold assets that are normally subject to restrictions such as:

- funds that are dedicated to policyholders;
- funds subject to local exchange controls or other national restrictions;
- subordinated debt or other hybrid instruments that legally constitute liabilities of the issuing entity hence not fully transferable; and
- minority interests.

As a consequence of this, there is no material practical or legal impediment to the transfer of capital. Nevertheless, the Bank's assessment of its levels of surplus capital includes, but is not limited to, the following factors:

- capital adequacy standards of local and external regulatory authority/authorities;
- capital needs for approved planned business expansion;
- capital effects of any approved acquisition /divestment or other exceptional corporate action;

- the level of distributable reserves; and
- tax efficiency of dividend distributions.

Finally, transferability of capital under stressed conditions is assessed as part of the stress testing process.

Internal capital adequacy assessment

The Group assesses the adequacy of capital by considering the resources necessary to cover unexpected losses arising from discretionary risks, such as credit risk and market risk, or non-discretionary risks, such as operational risk and reputational risk. The framework, together with related policies, define the Capital Assessment and Risk Profile ('CARP') process by which the Group examines the risk profile from both regulatory and economic capital viewpoints and ensures that the level of capital:

- remains sufficient to support the Group's risk profile and outstanding commitments;
- exceeds the formal minimum regulatory capital requirements by an internally determined margin;
- allows the bank to remain adequately capitalised in the event of a severe economic downturn stress scenario; and
- remains consistent with our strategic and operational goals.

The minimum regulatory capital that the Group is required to hold is determined by the rules established by the BMA for the consolidated Group and by local regulators for individual banking subsidiaries within the Group.

The Group has reviewed and determined via the annual capital plan a minimum internal capital target in excess of the minimum regulatory capital requirement agreed between the Group and the BMA at the completion of the Pillar 2 supervisory assessment process annually.

Stress testing

Stress testing and scenario analysis are central to the monitoring of the nature of risks, helping us to understand the sensitivities of the core assumptions in our capital plans to the adverse effect of extreme but plausible events. Stress testing allows us to formulate our response and mitigate risk in advance of actual conditions exhibiting the stresses identified in the scenarios. Market stresses which occurred throughout the financial system in recent years have been used to inform our capital planning processes and enhance the stress scenarios we employ. In

addition to our internal stress tests, others are undertaken at the request of regulators using their prescribed assumptions, and by the regulators themselves. The Bank also participates in the Standardised Stress Test required by the BMA as part of the Pillar 2 CARP process. We take into account the results of all such stress testing when assessing our internal and regulatory capital requirements.

Risk management objectives and policies

Overview

All our activities involve to varying degrees the measurement, evaluation, acceptance and management of risks. As risk is not static, our risk profile continually alters as a result of change in the scope and impact of a wide range of factors, from geopolitical to transactional. Our risk management framework is designed for the continuous monitoring of the risk environment and an integrated evaluation of risks and their interactions.

The objective of risk management, shared across the organisation, is to support Group strategies to build sustainable, profitable businesses in the long term interests of our shareholders and other stakeholders. We aim to ensure that risk management is embedded in how we run our business.

Risk management is embedded through:

- a historically strong risk culture, with personal accountability for decisions;
- a formal governance structure, with a clear, well understood framework of risk ownership, standards and policy;
- the alignment of risk and business objectives, with integration of risk appetite into business planning and capital management; and
- an independent and expert global risk function ('Global Risk').

Risk culture

HSBC has long recognised the importance of a strong risk culture, the fostering of which is a key responsibility of senior executives. Our risk culture may be characterised as conservative, control-based and rooted in experience. It is reinforced by our HSBC Values and our Global Standards, and forms the basis from which the Board, advised by the Risk Management Committee ('RMC'), establishes the Group's risk appetite and the risk management framework. These are instrumental in aligning the behaviour of individuals with the Group's attitude to assuming and managing risk.

Our global standards set the tone from the top, and are central to our approach to balancing risk and reward. All staff play a role in the management of risk as part of our 'three lines of defence' model. We have a system of personal, not collective, authorities for lending decisions. Personal accountability, reinforced by our HSBC Values, helps sustain a disciplined and constructive culture of risk management and control throughout HSBC.

Risk governance

Risk management objectives are integrated into the performance scorecards of the heads of regions, global businesses and key functions from the GMB down, and cascaded through the organisation. The objectives of Global Risk are also aligned through this process with strategic business objectives.

Risk appetite is a key component of our management of risk and is discussed in more detail below.

Organisation and responsibilities

An established framework of risk ownership and documented standards, policy and procedures, supports effective risk management and internal control systems.

The Board of Directors ('Board')

The role of the Board is to provide entrepreneurial leadership of the Group within a framework of prudent and effective controls which enables risks to be assessed and managed. The Board is collectively responsible for the long-term success of the Group and delivery of sustainable value to shareholders. It sets the strategy and risk appetite for the Group and approves the capital and operating plans presented by management for the achievement of the strategic objectives it has set. Implementation of the strategy set by the Board is delegated to the Bank's Executive Management Committee which is led by the Bank's CEO.

Audit and Risk Committee

The Audit and Risk Committee, a committee of the Board, is accountable to the Board and has non-executive responsibility for oversight of and advice to the Board on matters relating to financial reporting and high-level risk-related matters and risk governance. The responsibilities of the Audit and Risk Committee are clearly set out in its Terms of Reference which are approved by the Board.

Executive Management Committee ('EXCO')

The Board has delegated to EXCO accountability for the day to day management of the Group. The

responsibilities of EXCO are clearly set out in its Terms of Reference which are approved by the Board and include its primary responsibility for developing and implementing the Group's operating and strategic plans.

In addition, a number of key management committees have been established. The following are the principal committees discharging duties and responsibilities for the risk management framework of the Group:

Risk Management Committee ('RMC')

The RMC provides strategic and tactical direction to risk management of all risks within the Group, including but not limited to: credit, market, operational and oversight, information technology, reputation, tax and compliance risks. The RMC serves as the primary governance body of the Group's risk management framework.

Operational Risk and Internal Control Committee ('ORIC')

The purpose of ORIC is to provide governance and strategic oversight of the operational risk management framework, including the identification, assessment, monitoring and appetite for operational risk. The Group's ORIC covers all businesses and operations for which the Country Business Head is responsible and all subsidiary legal entities. The Group's ORIC actively oversees internal controls over the Group.

Asset Liability Management Committee ('ALCO')

One of the specific responsibilities of ALCO is to review all balance sheet risks on a systematic basis to ensure that adequate controls exist and that the related returns fully reflect these risks and that adequate capital is allocated to support these risks. ALCO is also responsible for ensuring prudent management of the following balance sheet risks: interest rate risk, liquidity and funding risk, foreign exchange risk, and credit risk.

The risk management framework also includes other committees such as the Credit Policy Committee Retail Risk, Credit Policy Committee Wholesale Risk, Reputational Risk Management Committee, Business Continuity Committee, Valuation and Hedging Committee, Insurance Risk Management Committee, Project Office Committee and Safety and Health Committee.

Group policy

HSBC's risk management policies are encapsulated in the Group Standards Manual ('GSM') and cascaded in a hierarchy of policy manuals throughout HSBC to communicate standards, instructions and guidance to employees. They support the formation of risk appetite and establish procedures for monitoring and controlling risks, with timely and reliable reporting to management. HSBC regularly reviews and updates its risk management policies, systems and methodologies to reflect changes in law, regulation, markets, products and emerging best practice. Functional Instruction Manuals ('FIM') are the vehicles by which HSBC policies on risk and capital governance are articulated and indeed are the operating platforms for HSBC. All employees are required to have read and adhere to GSM and relevant FIMs.

Each business area is responsible for creating and maintaining its own business-specific procedures. Staff are trained using the procedures which are reviewed on a regular basis. The Internal Control department performs independent regular reviews and highlights any procedural gaps. In addition, HSBC Group Audit conducts periodic audits of functions and businesses.

Risk appetite

The Group's risk appetite framework, which is approved annually, describes the quantum and types of risk the Group is prepared to take in executing its strategy. It is central to an integrated approach to risk, capital and business management and supports the Group in achieving its return on equity objectives, as well as being a key element of meeting the Group's obligations under the supervisory review process of Basel II. Our approach is designed to reinforce the integration of risk considerations into key business goals and planning processes.

The formulation of risk appetite considers the Group's risk capacity, its financial position, the strength of its core earnings and the resilience of its reputation and brand. It is expressed both qualitatively, describing which risks are taken and why, and quantitatively. Senior management attach quantitative metrics within the risk appetite framework in order that:

- underlying business activity may be guided and controlled so it continues to align with Risk appetite;
- key assumptions underpinning the risk appetite can be monitored and, as necessary, adjusted through subsequent business plan iterations; and

- anticipated mitigating business decisions are flagged and acted upon promptly.

The risk appetite framework covers both the beneficial and adverse aspects of risk. It is used as the basis for risk evaluation, capital ratio monitoring and performance measurement for the Group. Risk appetite is executed through the operational limits that control the levels of risk run by the Group and customer groups and is measured using risk-adjusted performance metrics.

Further details on risk management may be found on pages 50 to 53 of the *Consolidated Financial Statements 2013*.

Credit risk

Overview and objectives

Credit risk is the risk of financial loss if a customer or counterparty fails to meet a payment obligation under a contract. It arises principally from direct lending, trade finance and leasing business, but also from off-balance sheet products such as counterparty risk guarantees and credit derivatives, and from holdings of debt and other securities. Credit risk generates the largest regulatory capital requirement of the risks we incur.

The principal objectives of our credit risk management function are:

- to maintain a strong culture of responsible lending, and a robust credit risk policy and control framework;
- to both partner and challenge our businesses in defining, implementing and continually re-evaluating our credit risk appetite under actual and stress scenario conditions; and
- to ensure there is independent, expert scrutiny of credit risks, their costs and their mitigation.

Credit Risk Management

HSBC is responsible for the formulation of high-level credit policies. It also reviews the application of HSBC's universal credit risk rating system. HSBC's credit risk limits to counterparties in the financial and government sectors are managed centrally to optimise the use of credit availability and to avoid excessive risk concentration.

Cross-border risk is controlled through the imposition of country limits, which are determined by taking into account economic and political factors, and local business knowledge, with sub-limits by maturity and type of business. Transactions with counterparties in higher risk countries are considered on a case-by-case basis.

Within the overall framework of the HSBC policy, the Group has an established risk management process encompassing credit approvals, control of exposures (including those to borrowers in financial difficulty), credit policy direction to business units and the monitoring and reporting of exposures both on an individual and a portfolio basis.

Group management is responsible for the quality of its credit portfolios and follows a credit process involving delegated approval authorities and credit procedures, the objective of which is to build and maintain risk assets of high quality. Regular reviews are undertaken to assess and evaluate levels of risk concentration, including those to individual industry sectors and products. Special attention is paid to the management of problematic loans. Where deemed appropriate, specialist units are established to provide intensive management and control to maximise recoveries of assets, which show early signs of potential impairment.

The following pages set out credit risk exposures, RWAs and regulatory capital requirements at 31 December 2013, together with 31 December 2012 comparatives.

Application of the standardised approach

The standardised approach requires banks to use risk assessments prepared by External Credit Assessment Institutions ('ECAIs') or Export Credit Agencies to determine the risk weightings applied to rated counterparties. ECAI risk assessments are used as part of the determination of the risk weightings for the following classes of exposure:

- Sovereigns and multilateral development banks;
- Public sector entities;
- Corporates; and
- Banks and securities firms.

All other exposure classes are assigned risk weightings according to rules prescribed in the BMA Framework.

For the purpose of Pillar 1 reporting to the regulator, the Group has nominated Standard & Poor's ('S&P') Rating Group as the BMA-recognised ECAI. Credit assessments of Moody's Investors Services and Fitch Group are subject to regular internal review but do not form the basis for local regulatory reporting. BMA approval will be sought prior to any future nomination of Moody's and/or Fitch. The Group has not nominated any Export Credit Agencies.

Data files of external ratings from the nominated ECAI are matched with customer records in the Group's centralised credit database. When calculating the risk-weighted value of any exposure under the standardised approach, the customer in question is identified and matched to a rating, according to the BMA's rating selection rules. The relevant risk rate is then derived using the BMA's prescribed credit quality step mapping.

Credit quality step	S&P's assessments	Moody's assessments	Fitch's assessments
1	AAA to AA-	Aaa to Aa3	AAA to AA-
2	A+ to A-	A1 to A3	A+ to A-
3	BBB+ to BBB-	Baa1 to Baa3	BBB+ to BBB-
4	BB+ to BB-	Ba1 to Ba3	BB+ to BB-
5	B+ to B-	B1 to B3	B+ to B-
6	CCC+ and below	Caa1 and below	CCC+ and below

The table on the following page sets out the distribution of standardised exposures across credit quality steps for all exposures to sovereigns and multilateral development banks, public sector entities, corporates, and banks and securities firms.

Capital and Risk Management Pillar 3 Disclosures at 31 December 2013 (continued)

¹ Credit risk mitigation is applied to claims on banks fully guaranteed by sovereigns rated A or above.

Credit risk mitigation ('CRM')

Our approach when granting credit facilities is to do so on the basis of capacity to repay rather than placing primary reliance on credit risk mitigants. Depending on a customer's standing and the type of product, facilities may be provided unsecured. Mitigation of credit risk is nevertheless a key aspect of effective risk management and, in a diversified financial services organisation such as HSBC Group, takes many forms.

Our general policy is to promote the use of credit risk mitigation, justified by commercial prudence and good practice as well as capital efficiency. Specific, detailed policies cover the acceptability, structuring and terms of various types of business with regard to the availability of credit risk mitigation, for example in the form of collateral security. These policies, together with the setting of suitable valuation parameters, are subject to regular review to ensure that they are supported by empirical evidence and continue to fulfil their intended purpose.

We have safeguards designed to ensure that exposures to providers or types of risk mitigation do not become excessive in relation to the Group's capital resources.

CRM techniques that are currently applied by the Group reduce or transfer credit risk primarily by affecting the risk weightings through collateralisation or the use of guarantees.

The most common method of mitigating credit risk is to take collateral. Usually, in the residential and commercial real estate businesses, a mortgage over the property is taken to help secure claims. In the commercial and industrial sectors, charges are created over business assets such as premises, stock and debtors. Loans to private banking clients may be made against the pledge of eligible marketable securities or cash. Facilities to small and medium enterprises are commonly granted against guarantees given by their owners and/or directors. Guarantees from third parties can arise where the Group extends facilities without the benefit of any alternative form of security, e.g. where it issues a bid or performance bond in favour of a non-customer at the request of another bank.

The most commonly used collateral for off-balance sheet exposures include cash and fixed deposit accounts held with the Bank, investment in HSBC Corporate Money Fund or other investment portfolios and guarantees.

Recognition of risk mitigation under the standardised approach

Where credit risk mitigation is available in the form of an eligible guarantee, non-financial collateral, or credit derivatives, the exposure is divided into covered and uncovered portions. The covered portion, which is determined after applying an appropriate 'haircut' for currency and maturity mismatch (and for omission of restructuring clauses for credit derivatives, where appropriate) to the amount of the protection provided, attracts the risk weight of the protection provider. The uncovered portion attracts the risk weight of the obligor. For exposures fully or partially covered by eligible financial collateral, the value of the exposure is adjusted under the Financial Collateral Comprehensive Method ('FCCM') using supervisory volatility adjustments, including those arising from currency mismatch, which are determined by the specific type of collateral (and, in the case of eligible debt securities, their credit quality) and its liquidation period. The adjusted exposure value is subject to the risk weight of the obligor.

Table 8 sets out the credit risk mitigation for exposures under the standardised approach, expressed as the exposure value covered by the credit risk mitigant, and table 7 sets out the distribution of standardised exposures across credit quality steps.

The valuation of credit risk mitigants seeks to monitor and ensure that they will continue to provide the secure repayment source anticipated at the time they were taken. Where collateral is subject to high volatility, valuation is frequent; where stable, less so. In the residential mortgage business, on the other hand, the Group policy prescribes valuation at intervals of up to three years, or more frequently as the need may arise, at the discretion of the business line, by a variety of methods ranging from use of market indices to individual professional inspection.

Capital and Risk Management Pillar 3 Disclosures at 31 December 2013 (continued)

Past due and impaired loans

Loans are classified in accordance with the BMA Framework.

The approach followed for specific and collective allowances and statistical methods can be found on pages 11 and 12 of the *Consolidated Financial Statements 2013*. Details of allowances for loan impairment at 31 December 2013 and 2012 can be found on page 32 to 34 of the *Consolidated Financial Statements 2013*.

An analysis by geographical region shows that the majority of the loan impairment is provided for loans in Bermuda.

Further details of loans that are past due up to 90 days and more than 90 days by counterparty type are set out in the table below.

Table 9: Past due loans and allowance for loan impairment by counterparty type

	Residential mortgages US\$m	Commercial mortgages US\$m	Other US\$m	Total US\$m
At 31 December 2013

Market risk

Overview and objectives

Market risk is the risk that movements in market factors, including foreign exchange rates, commodity prices, interest rates, credit spreads and equity prices, will reduce the Group's income or the value of portfolios.

The Group is not required to report under market risk methodologies as its trading book does not exceed the de minimis threshold, resulting in an exemption as defined in the BMA Framework.

The objectives of the Group's market risk management are to manage and control market risk exposures in order to optimise return within the Group's risk appetite.

Organisation and responsibilities

The management of market risk is undertaken mainly in Global Markets using risk limits approved by the HSBC Group Management Board. Limits are set for portfolios, products and risk types. Market liquidity is an important factor taken into account when setting limits. Final approval of limits resides with local entity Boards.

Global Risk is responsible for our market risk management policies and measurement techniques. The Group has an independent market risk management and control function which is responsible for measuring market risk exposures in accordance with the policies defined by Global Risk, and for monitoring and reporting exposures against the prescribed limits on a daily basis. Interest rate risk in the banking book ('IRRBB') is defined as the exposure of our non-trading products to interest rates. This risk arises in such portfolios principally from mismatches between the future yield on assets and their funding costs, as a result of interest rate changes. Analysis of this risk is complicated by behavioural assumptions regarding the economic duration of liabilities which are contractually repayable on demand such as current accounts.

The Group assesses the structural interest rate risks which arise in the businesses and transfers these risks to the Group's balance sheet management team. When the behavioural characteristics of a product differ from its contractual characteristics, the behavioural characteristics are assessed to determine the appropriate underlying interest rate risk. ALCO regularly monitors all such behavioural assumptions and interest rate risk positions to ensure they comply with established interest rate risk limits.

Measurement and monitoring

In the course of managing interest rate risk, quantitative techniques and simulation models are used where appropriate to identify the potential net interest income and market value effects of these interest rate positions under different scenarios. The primary objective of such interest rate risk management is to limit potential adverse effects of interest rate movements on net interest income whilst balancing the effect on the current net operating income stream and unrealised mark-to-market positions.

A principal part of the Group's management of market risk is to monitor the sensitivity of projected net interest income under varying interest rate scenarios (simulation modelling). The Group aims to mitigate the effect of prospective interest rate movements, which could reduce future net interest income, while balancing the cost of such hedging activities on the current net operating income stream.

The models measure the effect on net interest income due to parallel and ramp movements of plus or minus 100 basis points in all yield curves. The results represent the effect of the pro-forma movements in net interest income based on the projected yield curve scenarios and the Group's current interest rate risk profile.

For model results see page 51 of the *Consolidated Financial Statements 2013*.

The Group's foreign exchange exposure comprises trading exposures and structural foreign currency translation exposure. Structural currency risk exists for the Group in holding subsidiary company investments whose functional currencies are not the US dollar or Bermuda dollar.

Operational risk

Overview and objectives

Operational risk is defined as ‘the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, including legal risk’.

Operational risk is relevant to every aspect of the Group’s business and covers a wide spectrum of issues. Losses arising from unauthorised activities, error, omission, inefficiency, fraud, systems failure or from external events all fall within the definition of operational risk.

The objective of the Group’s operational risk management is to manage and control operational risk in a cost-effective manner within targeted levels of operational risk consistent with the Group’s risk appetite.

Organisation and responsibilities

Responsibility for minimising operational risk management lies primarily with the Group’s management and staff. Local management within the Group is responsible for implementing HSBC standards on operational risk throughout their operations. Where deficiencies are evident, these are required to be rectified within a reasonable timeframe.

The Group Operational Risk function and the Operational Risk Management Framework (‘ORMF’) assist business management in discharging their responsibilities.

The ORMF defines minimum standards and processes, and the governance structure for operational risk and internal control across the Group. Inherent to the ORMF is a ‘Three lines of defence’ model to the management of risk. The first line of defence is every employee at HSBC, the second consists of the Global Functions and the third is Internal Audit.

Measurement and monitoring

We have codified our ORMF in a high level standard, supplemented by detailed policies. These policies explain our approach to identifying, assessing, monitoring and controlling operational risk and give guidance on mitigating action to be taken when weaknesses are identified. In 2013, we continued to enhance our ORMF policies and procedures, and undertook various activities, such as a global training programme, to further embed the

use of the framework in the management of the business.

Articulation of risk appetite for material operational risks helps the business to understand the level of risk our organisation is willing to take. Monitoring operational risk exposure against risk appetite on a regular basis, and setting out our risk acceptance process, drives risk awareness in a more forward-looking manner. It assists management in determining whether further action is required.

The ORMF defines a standard risk assessment methodology and provides a tool for the systematic reporting of operational loss data.

Operational risk and control assessment approach

Operational risk and control assessments are performed by individual business units and functions. The risk and control assessment process is designed to provide business areas and functions with a forward-looking view of operational risks, an assessment of the effectiveness of controls, and a tracking mechanism for action plans so that they can proactively manage operational risks within acceptable levels. Risk and control assessments are reviewed and updated at least annually.

Appropriate means of mitigation and controls are considered. These include:

- making specific changes to strengthen the internal control environment;
- investigating whether cost-effective insurance cover is available to mitigate the risk; and
- other means of protecting us from loss.

Recording

We use a centralised database to record the results of our operational risk management process. Operational risk and control assessments, as described above, are input and maintained by business units. Business management and Business Risk and Control Managers monitor and follow up the progress of documented action plans.

Operational risk loss reporting

To ensure that operational risk losses are consistently reported and monitored at HSBC Group level, the Bank is required to report individual losses when the net loss is expected to be equal to or greater than US\$10,000 and to aggregate all other operational risk losses under US\$10,000. Losses are entered into ORION, HSBC’s system of record for capturing and reporting Operational Risk data.

Glossary

Term	Definition
B	
Basel II	The capital adequacy framework issued by the Basel Committee on Banking Supervision in June 2006 in the form of the 'International Convergence of Capital Measurement and Capital Standards'.
Basel III	In December 2010, the Basel Committee issued 'Basel III rules: a global regulatory framework for more resilient banks and banking systems' and 'International framework for liquidity risk measurement, standards and monitoring'. Together these documents present the Basel Committee's reforms to strengthen global capital and liquidity rules with the goal of promoting a more resilient banking sector. In June 2011, the Basel Committee issued a revision to the former document setting out the finalised capital treatment for counterparty credit risk in bilateral trades. The Basel III requirements will be phased in with full implementation by 1 January 2019.
BMA	Bermuda Monetary Authority ('BMA') is the regulator of financial institutions in Bermuda.
C	
CARP	Capital assessment and risk profile ('CARP') is the Group's own annual assessment of the levels of capital that it needs to hold through an examination of its risk profile from a regulatory viewpoint.
Commercial real estate	Any real estate investment, comprising buildings or land, intended to generate a profit, either from capital gain or rental income.
Credit quality step	A step in the BMA credit quality assessment scale which is based on the credit ratings of External Credit Assessment Institutions ('ECAIs'). It is used to assign risk weights under the standardised approach.
Credit risk	Risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. It arises mainly from direct lending, trade finance and leasing business, but also from products such as guarantees, derivatives and debt securities.
Credit risk mitigation ('CRM')	A technique to reduce the credit risk associated with an exposure by application of credit risk mitigants such as collateral, guarantees and credit protection.
E	
ECAI	External Credit Assessment Institution, such as Moody's Investors Service, Standard & Poor's Ratings Group or Fitch Group.
Economic profit	The difference between the return on financial capital invested by shareholders ('return on invested capital') and the cost of that capital. Economic profit may be expressed as a whole number or as a percentage.
Exposure	A claim, contingent claim or position which carries a risk of financial loss.
Exposure at default ('EAD')	The amount expected to be outstanding after any credit risk mitigation, if and when the counterparty defaults. EAD reflects drawn balances as well as allowance for undrawn amounts of commitments and contingent exposures.
Exposure Value	Exposure at default

Capital and Risk Management Pillar 3 Disclosures at 31 December 2013 (continued)

G

GMB HSBC Group Management Board.

H

Haircut With respect to credit risk mitigation, an adjustment to collateral value to reflect any currency or maturity mismatches between the credit risk mitigant and the underlying exposure to which it is being applied. Also a valuation adjustment to reflect any fall in value between the date the collateral was called and the date of liquidation or enforcement.

Impairment allowances Management's best estimate of losses incurred in the loan portfolios at the balance sheet date.

Internal ratings-based approach ('IRB') A method of calculating credit risk capital requirements using internal, rather than supervisory, estimates of risk parameters.

Invested capital Equity capital invested by the shareholder.

IRB advanced approach A method of calculating credit risk capital requirements using internal probability of default ('PD'), loss given default ('LGD') and exposure at default ('EAD') models.

L

Loss given default ('LGD') The estimated ratio (percentage) of the loss on an exposure to the amount outstanding at default (EAD) upon default of a counterparty.

M

Market risk The risk that movements in market risk factors, including foreign exchange rates and commodity prices, interest rates, credit spreads and equity prices will reduce income or portfolio values.

N

Net interest income The amount of interest received or receivable on assets net of interest paid or payable on liabilities.

O

Operational risk The risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, including legal risk.

R

Regulatory capital The capital which the Bank and/or the Group holds, determined in accordance with rules established by the BMA.

Residual maturity The period outstanding from the reporting date to the maturity or end date of an exposure.

Risk appetite An assessment of the types and quantum of risks to which the Bank and/or the Group wishes to be exposed.

Risk-weighted assets ('RWAs') Calculated by assigning a degree of risk expressed as a percentage (risk weight) to an exposure in accordance with the applicable standardised approach rules.

RWA density The average risk weight, expressed as a percentage of RWAs divided by exposure value, based on those RWA and exposure value numbers before they are rounded to the nearest US\$0.1mil for presentation purposes.
